YesYas!

UI/UX Design Document

Version 1.0 • June 2026 • Status: Active

A quieter way to say what you want — together.

Privacy is visible • Mobile-first • Tone-configurable • Consent-driven reveals

This document defines the complete interaction model, visual language, and user flows for YesYas! — a privacy-first intimacy and desire-sharing application.

Visual Overview

High-fidelity mockups illustrating the core experience, color system, typography scale, and key screens. These visuals represent the exact look and feel defined in this specification.

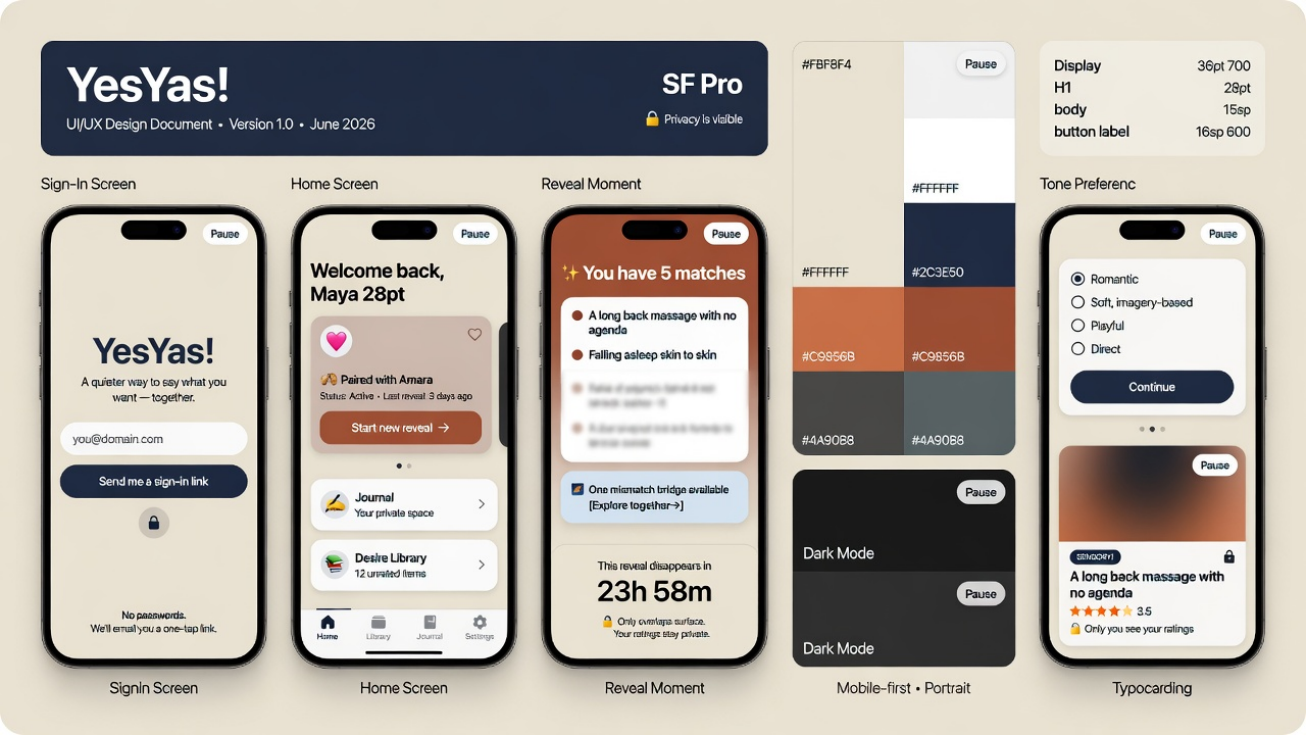

Figure 1 — Overview collage: Sign-In, Home, Reveal Moment, color palette, typography tokens, and mobile-first layout principles.

Confidential — Internal Use Only

High-Fidelity Screen Mockups

Realistic device-framed renderings of the primary user journeys. All interactions, states, and microcopy are shown exactly as implemented.

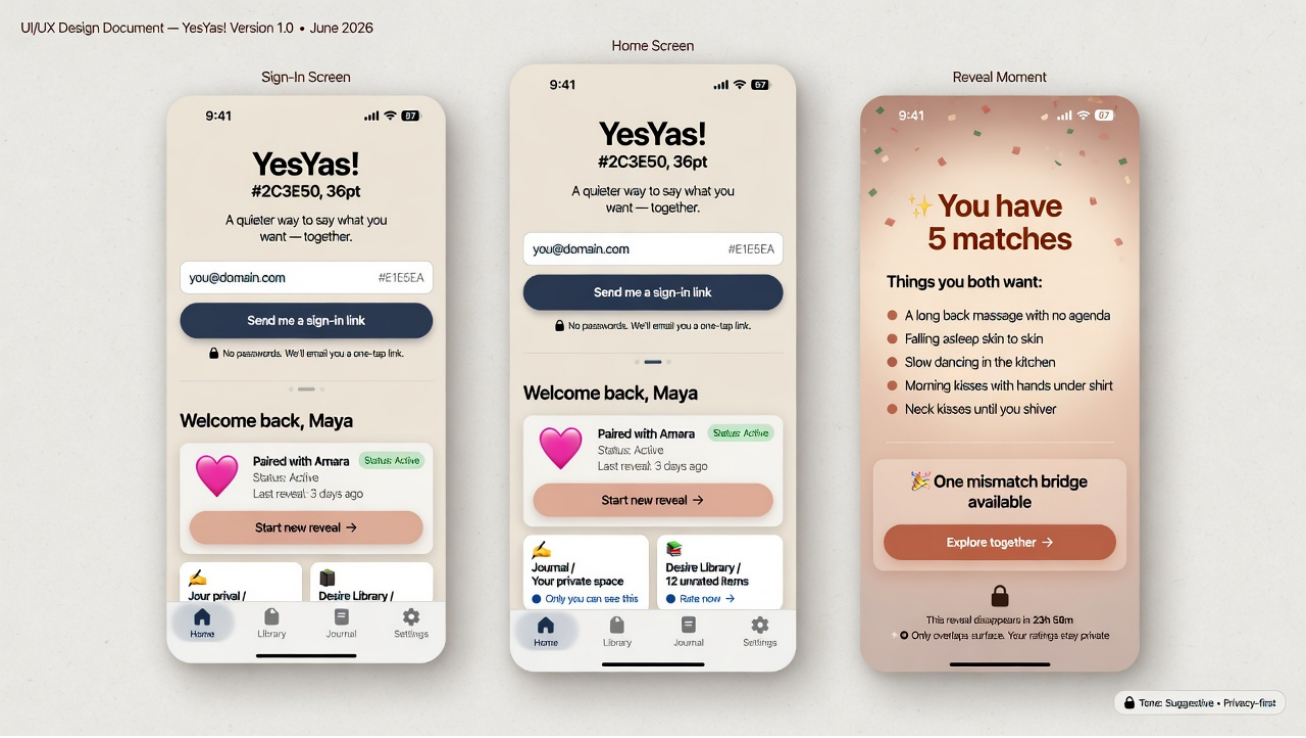

Figure 2 — Sign-In Screen, Home Screen (paired state), and Reveal Moment with confetti celebration and mismatch bridge card.

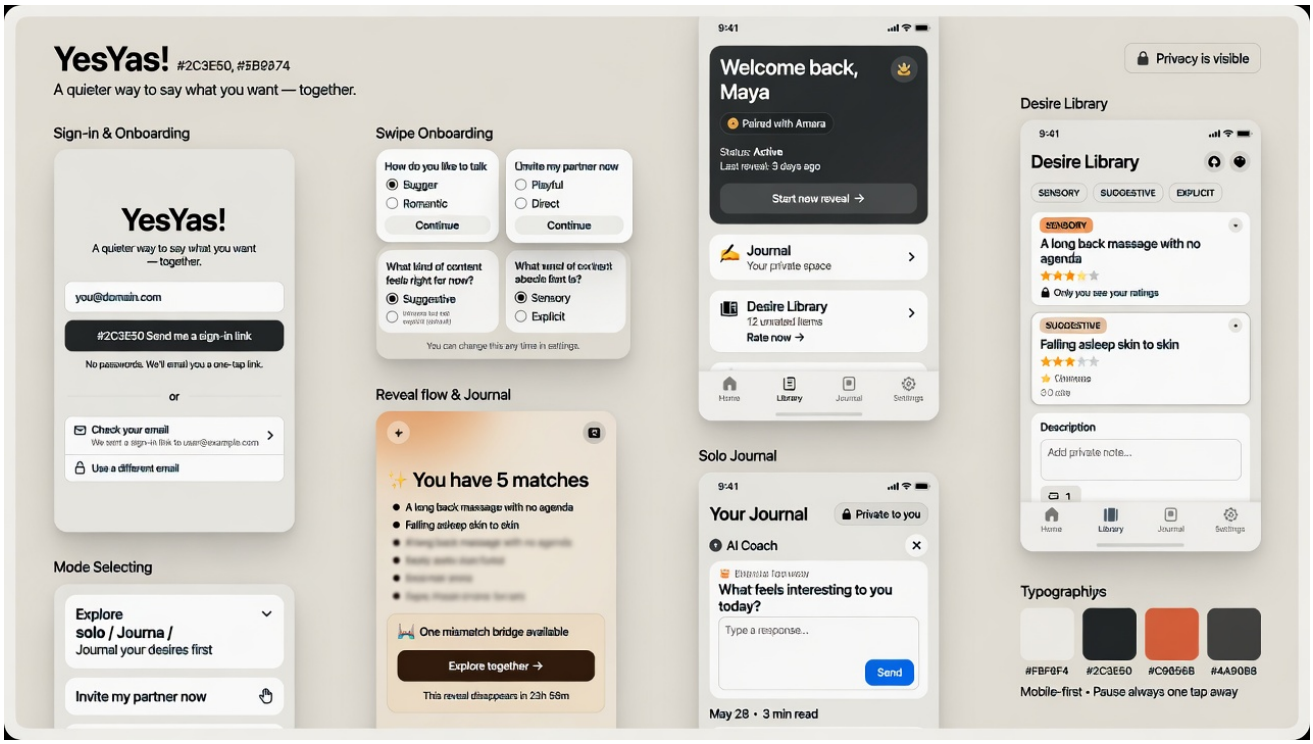

Figure 3 — Onboarding flows (Tone, Content Tier, Mode), Reveal flow, Solo Journal with AI Coach, Desire Library with tier filters, and typographic/color references.

1. Design Principles

These five principles guide every design decision. They are non-negotiable and must be reflected in every screen, component, and interaction.

- **Privacy is visible** — The UI constantly signals that nothing is shared without explicit consent. Locks, "Only you can see this" labels, and confirmation modals appear before any reveal or data sharing.
- **Reduce anxiety, not clarity** — Soft, warm visuals and generous spacing reduce emotional pressure. However, all copy must be crystal clear and specific — never vague or ambiguous about what a button does or what will happen next.
- **Tone is configurable** — The app adapts its voice to the user's chosen preference (Romantic, Playful, or Direct). Layout, structure, and information architecture remain consistent regardless of tone.
- **Mobile-first** — Every screen is designed and tested for a phone held in portrait mode. Web surfaces exist only for therapist export flows and are secondary.
- **Pause is always one tap away** — No user should ever feel trapped. A visible "Pause" button (or system back gesture) is present on every screen, especially during sensitive flows like reveals or onboarding.

2. Design System

2.1 Color Palette

A warm, trustworthy palette centered on soft off-white backgrounds and deep navy primary actions. Accent warm (#C9856B) is used for emotional, celebratory moments (reveals, matches). All colors meet WCAG AA contrast requirements.

Swatch	Token	Hex	Usage
	--color-bg	**#FBF8F4**	App background (warm off-white)
	--color-surface	**#FFFFFF**	Cards, modals, input fields
	--color-primary	**#2C3E50**	Primary text, primary buttons, tier badges
	--color-secondary	**#5B6A7A**	Secondary text, muted labels
	--color-muted	**#9AA3AE**	Placeholders, disabled states
	--color-border	**#E1E5EA**	Card borders, input borders
	--color-accent-warm	**#C9856B**	Reveal moments, match highlights, CTAs
	--color-accent-cool	**#4A90B8**	Info states, pairing status indicators
	--color-error	**#B23A48**	Error messages, destructive actions
	--color-success	**#3A7D44**	Confirm states, "sent" confirmations

Dark mode: Background inverts to #1A1F26, surface to #252B34. All tokens have dark variants. The app respects `userInterfaceStyle: "automatic"` from app.json.

2.2 Typography

System-native fonts (SF Pro on iOS, Roboto on Android) ensure familiarity and excellent readability. All sizes are specified in sp (scale-independent pixels) and respond to user Dynamic Type / text scaling settings.

Role	Font	Size	Weight
Display / App title	System default (SF Pro / Roboto)	36sp	700
Screen title (H1)	System default	28sp	700
Section heading (H2)	System default	20sp	600
Card title (H3)	System default	16sp	600
Body	System default	15–16sp	400
Caption / hint	System default	13sp	400
Button label	System default	16sp	600

Line height: 1.45× font size throughout. **Minimum tap target:** 44×44pt (WCAG AA).

2.3 Spacing

Base unit: 8pt. All spacing values are multiples of 8 (8, 16, 24, 32, 48pt). This creates a consistent vertical rhythm and simplifies layout decisions.

- **Padding inside cards:** 16pt
- **Screen edge padding:** 24pt
- **Vertical gap between sections:** 24–32pt
- **Minimum gap between interactive elements:** 8pt

3. Component Patterns

Reusable building blocks. Every component follows the color, type, and spacing rules above. Deviations require explicit design review.

Primary button — Full-width, 56pt height, 12pt border-radius, --color-primary fill, white label (16sp, 600). Active state darkens primary by 10%.

Secondary button / link button — No fill, --color-primary text, optional underline. Used for "Use a different email", "Withdraw my reveal", etc.

Card — White surface (#FFFFFF), 12pt radius, 1pt --color-border, 16pt internal padding. Subtle shadow on iOS (soft 8pt blur, 4% opacity).

Input field — White surface, 12pt radius, 1pt --color-border, 16pt padding, 16sp font. Focus state: 2pt --color-primary border.

Tier badge — Pill shape (16pt height), --color-primary fill, white uppercase label, 10sp font, 700 weight. Used in Desire Library and reveal results.

Rating stars — 5 stars, 32pt tap target each. Accent warm (#C9856B) fill when selected. Empty stars use --color-border. Tap anywhere in the row to set rating.

4. Screens & Wireframes

Detailed specifications for every major screen. High-fidelity visuals are shown in Figures 1–3. The text below provides exact layout hierarchy, copy, states, and interaction rules.

4.1 Sign-In Screen

Layout (from top):
• YesYas! wordmark (36pt, 700, #2C3E50)
• Tagline: "A quieter way to say what you want — together." (16sp, #5B6A7A, 2 lines)
• Email input field (you@domain.com placeholder)
• Primary CTA: "Send me a sign-in link" (full width)
• Microcopy: "No passwords. We'll email you a one-tap link." (13sp, muted)
• Subtle lock icon indicating passwordless flow

Post-send state: Replaces form with a confirmation card: "Check your email — We sent a sign-in link to user@example.com. Open it on this device to continue." + "Use a different email" link button.

4.2 Onboarding / Preferences (First Launch)

Three short swipeable screens shown only on first launch after authentication. Progress dots at bottom. "Continue" primary button enabled only after selection.

Screen A — Tone Preference

Question: "How do you like to talk about this?"
Radio options: Romantic (Soft, imagery-based), Playful (Light and exploratory), Direct (Clear and specific). Default: none selected initially.

Screen B — Content Tier

Question: "What kind of content feels right for now?"
Options: Sensory (Touch, warmth, physical closeness), Suggestive — default (Intimate but not explicit), Explicit (Fully frank content).
Footnote: "You can change this any time in settings."

Screen C — Mode Selection

Question: "How would you like to start?"
Two large tappable cards: "Explore solo — Journal your desires first" or "Invite my partner now".
Tapping either advances to the chosen home state (Journal or Pairing invite).

4.3 Home Screen (Signed-in)

Header: "Welcome back, [Name]" (28pt, 700)
Pairing card: Heart icon + "Paired with Amara", Status: Active (green pill), Last reveal: 3 days ago. Large "Start new reveal →" button in accent warm.
Journal card: ✍■ icon, "Journal — Your private space", "Write today →"
Desire Library card: ■ icon, "12 unrated items", "Rate now →"
Bottom tab bar: Home (active) | Library | Journal | Settings. Home icon filled when active.

4.4 Desire Library Screen

H1: "Desire Library"
Horizontal filter chips: Sensory | Suggestive (active) | Explicit
Vertical list of cards. Each card shows: Tier badge (pill), Title, 5-star rating row (tap to rate), optional user note.
Tapping a card expands inline: full description + note input field + star selector + "■ Only you see your ratings" reassurance.
Empty state: Encouraging illustration + "Start rating items to build your library" copy.

4.5 Reveal Flow (3 Steps)

Step 1 — Trigger / Ready?

"Ready for a reveal?"
Body: "You've rated 24 items. When your partner is ready too, you'll see what you share."
Privacy reassurance card: "Your ratings stay private, always. Only overlaps surface."
Primary: "I'm ready" | Secondary: "Not yet"

Step 2 — Waiting

"Waiting for Amara…"
"She has 72 hours to tap ready."
Large countdown: "71h 42m remaining"
Destructive link: "Withdraw my reveal" (requires confirmation modal)

Step 3 — Reveal Moment

Celebratory header with confetti: "■ You have 5 matches"
List of shared desires (bullet with warm accent dot)
Mismatch bridge card (if applicable): "■ One mismatch bridge available — Explore together →"
Footer: "This reveal disappears in 23h 58m" + lock icon + "Only overlaps surface. Your ratings stay private."

4.6 Solo Journal Screen

H1: "Your Journal" + persistent "■ Private to you" label
AI Coach card: Prompt "What feels interesting to you today?" + multiline input + "Send" button (blue accent)
Past entries list: Date • read time • preview snippet. Tapping opens full entry in modal or new screen.
Empty state for first use: Warm illustration + example prompts.

5. User Flows

Complete end-to-end flows. All branches and edge states are accounted for in the UI.

5.1 Onboarding Flow

App open → Not signed in? → Sign-In Screen → Enter email → Magic link sent → Open link on device → Auth session established → First time? → Onboarding (Tone → Content Tier → Mode Selection) → Solo Journal Home OR Pairing Invite Screen

5.2 Core Paired Loop

Home → Rate items (Library) → Expand card → Rate 1-5 stars + optional note → Collapse
OR Home → Start reveal → Reveal Trigger → "I'm ready" → Waiting Screen → Partner taps ready → Both see Reveal Moment (matches + mismatch bridge if any)
OR Home → Journal → Chat with AI coach → (optional) Invite partner from journal

5.3 Pairing Invite Flow

Invite Partner Screen (from Home or Journal) → Share invite code / deep link → Partner opens link → Signs in or creates account → Accepts pairing → Both see paired Home with active status

5.4 Therapist Export Flow

Settings → Therapist Export → "Generate summary" → Confirmation modal: "This requires your partner's consent" → Partner receives in-app nudge → Taps "I consent" → PDF generated → Signed URL shown to both → "Share with therapist" opens system share sheet

6. Accessibility

YesYas! is built to be inclusive and usable by people with a wide range of abilities. All guidelines below are mandatory.

- Minimum 4.5:1 contrast ratio on all body text (WCAG AA)
- All interactive elements have accessible labels for VoiceOver / TalkBack
- Minimum 44×44pt touch targets throughout (exceeds WCAG)
- No color-only information indicators — always paired with text or icon
- Dynamic Type support: all font sizes respond to system text-size settings
- FLAG_SECURE on Android reveal screens; blur-on-backgrounding on iOS to protect sensitive content
- Semantic headings and landmarks for screen reader navigation
- Reduced motion support: respect user "Prefer reduced motion" setting for confetti and transitions
